Using cases from the authors' files or from case files of other working clinicians, CASEBOOK IN ABNORMAL PSYCHOLOGY, International Edition portrays the rich and arresting nature of disorders manifested in real people. Cases illustrate every major DSM-IV category, followed by a therapy outcome section that tells the "rest of the story" of what happened to these clients. Using an integrative approach, the authors emphasize the multiple causes of disorders and incorporate developmental and cultural issues in each case. Complex cases are presented without a diagnosis, so students can come up with a

both normative and abnormal development throughout children ' s lives. Consistent with previous editions, several themes run throughout the book: Developmental psychopathology: Children's and adolescents' behaviors are on a continuum (from very adaptive to very maladaptive), with only the very severe ends of the spectrum being conceptualized as disorders.

Diversity, inclusion, and understanding: Special attention is given to issues of race/ethnicity, gender, family constellation, religious orientation, primary language, socioeconomic status, and physical differences to help students see the commonalities and differences of abnormal child behavior within a cross-cultural and international context.
