The book provides students and lecturers with real life examples to demonstrate basic principles. The book helps students, instructors, and those new to the field learn about the principles of ecology and conservation by completing a series of problems. Prior knowledge of the subject is not assumed; the work requires users to be able to perform simple calculations and draw graphs. Most of the exercises in the book have been used widely by the author's own students over a number of years, and many are based on real data from published research. Exercises are succinct with a broad number of options, which is a unique feature among similar books on this topic. The book is primarily intended as a resource for students, academics, and instructors studying, teaching, and working in zoology, ecology, biology, wildlife conservation and management, ecophysiology, behavioural ecology, population biology and ecology, environmental biology, or environmental science. Students will be able to progress through the book attempting each exercise in a logical sequence, beginning with basic principles and working up to more complex exercises. Alternatively they may wish to focus on specific chapters

One reason for this is the great number of photos necessary for such a book to be of any value. Fortunately for students, Dr. Castner has spent the past 25 years photographing insects with his work appearing in everything from National Geographic to Ranger Rick. Dr. Castner's experience in teaching and working with students has allowed him to produce a work that exactly addresses their needs. Written to be read aloud by two voices—sometimes alternating, sometimes simultaneous—here is a collection of irresistible poems that celebrate the insect world, from the short life of the mayfly to the love song of the book louse. Funny, sad, loud, and quiet, each of these poems resounds with a booming, boisterous, joyful noise. In this remarkable volume of poetry for two voices, Paul Fleischman verbally re-creates the "Booming/boisterous/joyful noise" of insects. The poems resound with the pulse of the cicada and the drone of the honeybee. Eric Beddows's vibrant drawings send each insect soaring, spinning, or creeping off the page in its own unique way. Paul Fleischman has created not only a clear and fascinating guide to the insect world—from chrysalid butterflies to whirligig beetles—but an exultant celebration of life.
