Why is high performance indoor wireless service needed, and how is it best implemented? As the challenge of providing better service and higher data speeds and quality for mobile applications intensifies, ensuring adequate in-building and tunnel coverage and capacity is increasingly important. A unique, single-source reference on the theoretical and practical knowledge behind indoor and tunnel radio planning, this book provides a detailed overview of mobile networks systems, coverage and capacity solutions with 2G, 3G and 4G cellular system technologies as a backdrop.

Mobile wireless applications are a good way to increase productivity, improve customer service and streamline business processes. 3G mobile applications, however, bring a unique challenge: ensuring adequate in-building coverage. Indoor Radio Planning provides an overview of mobile networks systems and coverage solutions for cellular networks in buildings. The background of GSM, UMTS and HSPA cellular systems technology are presented and form the backdrop of the main discussion as to why indoor coverage is needed and how it is best implemented. Basic passive distributed antenna systems (DAS) through to advanced fiber optic systems are discussed in detail, giving the reader a good understanding of all the available solutions. In addition, there is a section covering multi-operator systems, as this is becoming a more and more utilized approach. Other sections cover aspects such as how to upgrade passive DAS from 2G to 3G, noise analysis, link budgets, traffic calculations and software tools that can be used to provide help with creating in-building designs. These topics are examined at length from the basic considerations to advanced indoor radio planning. One of the first texts dedicated solely to indoor radio planning, it will be of essential reading to engineering and planning personnel working for mobile operators, with the book being written with radio planners in mind throughout. Indoor Radio Planning will also be of interest to companies who service and manufacture equipment for operators such as suppliers of indoor coverage systems and vendors of base stations for mobile coverage. A unique, single-source reference for both the theoretical and practical knowledge behind indoor radio planning Written by a leading practitioner in the field with more than 15 years of experience Based on real life examples and implemented systems and results Analyzes co-existence of mobile services and inter modulation analysis Outlines the key parameters and metrics for designing DAS for GSM, DCS, UMTS and HSPA

Abused, unloved and alone. Can't Anyone Help Me? is the shocking true story by Toni Maguire. Jackie was an unwanted child. So unwanted that her mother regularly left Jackie at her uncle's house. Which was when the nightmare started. For when his wife went out, her uncle's friends came round. He had a Special Room. In it Jackie was tied up and molested, beaten, burnt by cigarettes and urinated on. Sometimes other children were brought along. Jackie got to know the Special Room intimately. Jackie could never bring herself to tell her mother. She ended up in a home for disturbed children. She ran away, and a life of homelessness, drugs, prostitution and psychiatric wards followed. Eventually, Jackie sought help. But could she turn her life around? Would her evil uncle and his Special Room haunt her forever? Can't Anyone Help Me? by Toni Maguire is the inspirational story of struggle and survival against all odds as one young woman attempts to put her torturous past behind her and make a future for herself. Toni Maguire is the author of four bestselling books: Don't Tell Mummy, When Daddy Comes Home, Nobody Came and Helpless.
