Macroeconomics in Context lays out the principles of macroeconomics in a manner that is thorough, up to date, and relevant to students. Like its counterpart, Microeconomics in Context, the book is attuned to economic realities—and it has a bargain price. The in Context books offer affordability, engaging treatment of high-interest topics from sustainability to financial crisis and rising inequality, and clear, straightforward presentation of economic theory. Policy issues are presented in context—historical, institutional, social, political, and ethical—and always with reference to human well-being.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

Introduction to Modern Economic Growth is a groundbreaking text from one of today's leading economists. Daron Acemoglu gives graduate students not only the tools to analyze growth and related macroeconomic problems, but also the broad perspective needed to apply those tools to the big-picture questions of growth and divergence. And he introduces the economic and mathematical foundations of modern growth theory and macroeconomics in a rigorous but easy to follow manner. After covering the necessary background on dynamic general equilibrium and dynamic optimization, the book presents the basic workhorse models of growth and takes students to the frontier areas of growth theory, including models of human capital, endogenous technological change, technology transfer, international trade, economic development, and political economy. The book integrates these theories with data and shows how theoretical approaches can lead to better perspectives on the fundamental causes of economic growth and the wealth of nations. Innovative and authoritative, this book is likely to shape how economic growth is taught and learned for years to come. Introduces all the foundations for understanding economic growth and dynamic macroeconomic analysis Focuses on the big-picture questions of economic growth Provides mathematical foundations Presents dynamic general equilibrium Covers models such as basic Solow, neoclassical growth, and overlapping generations, as well as models of endogenous technology and international linkages Addresses frontier research areas such as international linkages, international trade, political economy, and economic development and structural change An accompanying Student Solutions Manual containing the answers to selected exercises is available (978-0-691-14163-3/\$24.95). See: http://press.princeton.edu/titles/8970.html. For Professors only: To access a complete solutions manual online, email us at: acemoglusolutions@press.princeton.edu

Age of Productivity offers a look at how the low productivity in Latin America and the Caribbean is preventing the region from catching up with the developed world. The authors look beyond the traditional macro explanations and dig all the way down to the industry and firm level to uncover the causes.

The United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2019 and 2020. Produced by the Department of Economic and Social Affairs, the five UN regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization.

For courses on economic development A complete, balanced introduction to the theory, issues, and latest research. Economic Development, Twelfth Edition—the leading textbook in this field—provides students with a complete and balanced introduction to the requisite theory, driving policy issues, and latest research. Todaro and Smith take a policy-oriented approach, presenting economic theory in the context of critical policy debates and country-specific case studies so you can see how theory relates to the problems and prospects of developing countries. Teaching and Learning Experiences This program presents a better teaching and learning experience—for you and your students. Use the text's Hallmark Approach to presenting engaging information: Shaped by the authors' personalities, this approach is backed up with extensive research and travel to provide the best data possible. Teach with strong pedagogy tools: The text reinforces central key concepts by presenting a clear learning path for students. Give students a real-world global perspective: Students are able to gain a unique perspective about world issues from two authors who strive to address different sides to problems.

Essay from the year 2018 in the subject Geography / Earth Science - Economic Geography, grade: 90.00, University of the West Indies, language: English, abstract: Development is defined as the standard of living of people economic development is supportive and it involves increased per capita income and creation of new opportunities in education, healthcare, employment sectors. In the 1950s and 1960s, development was mainly looked at through an economic lens and a country was developed was based on the standard and output of a country's economy. A more overall view began to take place in the 1970s as aspects such as poverty, health and education started to be considered and recognised as social issues that resulted from trying to achieve economic development. This led to the birth of the measurement of social development and the emergence of social indicators of development. The two categories of economic and social indicators of development facilitate a more wholesome way of analysing and determining development. Each of these indicators has its own importance that helps to classify countries development and their economies which is what this essay will be looking to discuss.

Economics is about understanding the rational behaviour of economic agents (households, firms, industries and government) in their decisions to achieve best outcomes of their goals and aspirations. They collectively converge to achieve the utmost economic and social benefits for all in the country in terms of economic growth and development. Economic growth and development occur through efficient use of available resources to meet effective demand and social needs. The challenge that countries are facing is proper application of appropriate policy mix to optimize the opportunities of increasingly interdependent global economic landscape. For emerging economies, a multiple sector strategy that propels economic transformation is crucial. This needs to be predicated on robust macroeconomic policy framework that aligns with global production and consumption activities to drive economic growth process for achieving sustainable development.

"The period since the publication of the third edition of The Process of Economic Development has been a time of immense change in the developing world. China, India and Brazil have enjoyed a period of huge economic growth while smaller countries such as Vietnam and Angola have also been subject to striking transformation. Environmental issues such as climate change have also had a huge impact, while issues of security in the Middle East and elsewhere have underlined the importance of natural resources and the ongoing forces of globalization. The fourth edition of this popular textbook has been updated to reflect the new challenges faced by developing countries across Asia, Latin America and Africa, while retaining its ever important emphasis on institutions, the importance of technology and the influence of global finance and business" —
