"This lab text describes the tools and strategies of green chemistry, and the lab experiments that allow investigation of organic chemistry concepts and techniques in a greener laboratory setting. Students acquire the tools to assess the health and environmental impacts of chemical processes and the strategies to improve develop new processes that are less harmful to human health and the environment. The curriculum introduces a number of state-of-the-art experiments and reduces reliance on expensive environmental controls, such as fume hoods."--Provided by publisher.

This brief guidebook assists you in mastering the difficult concept of pushing electrons that is vital to your success in Organic Chemistry. With an investment of only 12 to 16 hours of self-study you can have a better understanding of how to write resonance structures and will become comfortable with bond-making and bond-breaking steps in organic mechanisms. A paper-on-pencil approach uses active involvement and repetition to teach you to properly push electrons to generate resonance structures and write organic mechanisms with a minimum of memorization. Compatible with any organic chemistry textbook. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
