The case history approach has an impressive record of success in a variety of disciplines. Collections of case histories, casebooks, are now widely used in all sorts of specialties other than in their familiar application to law and medicine. The case method had its formal beginning at Harvard in 1871 when Christopher Langdell developed it as a means of teaching. It was so successful in teaching law that

it was soon adopted in medical education, and the collection of cases provided the raw material for research on various diseases. Subsequently, the case history approach spread to such varied fields as business, psychology, management, and economics, and there are over 100 books in print that use this approach. The idea for a series of Casehooks in Earth Science grew from my experience in organizing and editing a collection of examples of one variety of sedimentary deposits. The project began as an effort to bring some order to a large number of descriptions of these deposits that were so varied in presentation and terminology that even specialists found them difficult to compare and analyze. Thus, from the beginning, it was evident that something more than a simple collection of

papers was needed. Accordingly, the nearly fifty contributors worked together with George de Vries Klein and me to establish a standard format for presenting the case histories.

Knowledge and Colonialism examines writings and drawings of eighteenth-century scientific travellers in South Africa against the background of administrative and commercial discourses. It is argued that these travellers benefited more from their relationship with the colonial order than the other way around

Design of Hybrid Molecules for Drug Development reviews the principles, advantages, and limitations involved with

designing these groundbreaking compounds. Beginning with an introduction to hybrid molecule design and background as to their need, the book goes on to explore a range of important hybrids, with hybrids containing natural products, molecules containing NO- and H₂S-donors, dual-acting compounds acting as receptor ligands and enzyme inhibitors, and the design of photoresponsive drugs all discussed. Drawing on practical case studies, the hybridization of molecules for development as treatments for a number of key diseases is then outlined, including the design of hybrids for Alzheimer's, cancer, and malaria. With its cutting-edge reviews of breaking developments in this exciting field, the book offers a novel approach for all those working in the design, development, and administration of

drugs for a range of debilitating disorders. Highlights an approach unimpaired by the limitations of the classical search for lead structures - one of the core problems in modern drug development processes, making the content of high relevance for both academic and non-academic drug development processes Pulls together research and design techniques in a novel way to give researchers the best possible platform from which to review the approaches and techniques applied Compares the advantages and disadvantages of these compounds Includes the very latest developments, such as photoactivatable and photo-responsive drugs

Written entirely in Spanish, this is the ideal introduction to Spanish linguistics for students. Using clear explanations, it covers all the basic concepts required to study the structural aspects of the Spanish language - phonetics and phonology, morphology and syntax - as well as the history of Spanish,

its dialects and linguistic variation. This second edition incorporates new features designed to enhance its usefulness for classroom teaching: chapters have been added on the sociolinguistics of Spanish in the USA, and on semantics and pragmatics. The chapter on syntax has been considerably expanded. Numerous exercises have been added throughout the book, as well as a new glossary to help with technical terms.

volunteer tourism in the Global South, paying particular attention to the governmental rationalities and socio-economic conditions that valorise it as a noble and necessary cultural practice. Combining theoretical research with primary data gathered during volunteering programs in Guatemala and Ghana, the author argues that although volunteer tourism may not trigger social change, provide meaningful encounters with difference, or offer professional expertise, as the brochure discourse and the scholarly literature on tourism and hospitality often promises, the formula remains a useful strategy for producing the subjects and social relations neoliberalism requires. Vrasti suggests that the value of volunteer tourism should not to be assessed in terms of the goods and services it delivers to the

global poor, but in terms of how well the practice disseminates entrepreneurial styles of feeling and action. Analysing the key effects of volunteer tourism, it is demonstrated that far from being a selfless and history-less rescue act, volunteer tourism is in fact a strategy of power that extends economic rationality, particularly its emphasis on entrepreneurship and competition, to the realm of political subjectivity. *Volunteer Tourism in the Global South* provides a unique and innovative analysis of the relationship between the political and personal dimensions of volunteer tourism and will be of great interest to scholars and students of international relations, cultural geography, tourism, and development studies.
