Immune Deficiency Foundation Diagnostic & Clinical Care

Introduction: During the last 4 decades, registration of patients with primary immunodeficiencies (PID) has played an essential role in different aspects of these diseases worldwide including epidemiological indexes, policymaking, quality controls of care/life, facilitation of genetic studies and clinical trials as well as improving our understanding about the natural history of the disease ...

Global systematic review of primary immunodeficiency

Patients with a primary humoral immunodeficiency (PID) are 91% more likely to have a psychiatric disorder and 84% more likely to exhibit suicidal behavior, compared against those without the ...

Immunodeficiency Strongly Linked to Mental Illness

Primary immunodeficiency (PI) diseases may be recognized due to sinopulmonary or gastrointestinal tract infections, organ abscesses, autoimmunity, or systemic signs, such as fever or failure to thrive (3, 6, 11, 14, 32). However, because of the diversity of immune defects, range of ages, and different clinical manifestations, distinguishing patients with PI in practice can be challenging.

Recognizing Primary Immune Deficiency in Clinical Practice

The NEMO deficiency syndrome is a complex disease caused by genetic mutations in the X-linked NEMO gene (also known as IKK gamma or IKKG). It can involve many different parts of the body and often manifests in different ways in different individuals. The most common symptoms are skin disease and susceptibility to certain bacterial infections that can be severe and affect

Amazon.com: Primary Immunodeficiency Diseases: A Molecular

Primary Immunodeficiency Disorders: A Historic and Scientific Perspective provides a complete historical context that is crucial for students and researchers concerned with primary immunodeficiency. When researchers have a poor understanding of the way we arrived where we are in research, they can miss important points about a disease, or miss out on how to approach new diseases.

Amazon.com: Primary Immunodeficiency Disorders: A Historic

Primary immune deficiency diseases (PIDDs) are rare, genetic disorders that impair the immune system. Without a functional immune response, people with PIDDs may be subject to chronic, debilitating infections, such as Epstein-Barr virus (EBV), which can increase the risk of developing cancer. Some PIDDs can be fatal. PIDDs may be diagnosed in infancy, childhood, or adulthood, depending on ...

Primary Immune Deficiency Diseases (PIDDs) | NIH: National

Compared to other human immune defects, CVID is a relatively frequent form of primary immunodeficiency, found in about 1 in 25,000 persons; this is the reason it is called "common." The degree and type of deficiency of serum immunoglobulins, and the clinical course, varies from patient to patient, hence, the word "variable."
