Wood is a porous and fibrous structural tissue found in the stems and roots of trees and other woody plants. It is an organic material - a natural composite of cellulose fibers that are strong in tension and embedded in a matrix of lignin that resists compression. Wood is sometimes defined as only the secondary xylem in the stems of trees, or it is defined more broadly to

Decide if a light-colored wood is maple. This is the most common of the blond colored woods and is often used in trim, flooring and in countertops. It has a wide grain. Keep in mind that a blond colored wood can also be pine. However, pine is characterized by a more distinctive grain. It is also much lighter
